Final Accounts

Purpose:

To gain more practice with arrays and classes and files.

Due Date:

The completed lab assignment is due Monday 2008-04-07 *at the beginning of lecture*.

Three Charge Accout Classes

Write a `ChargeAccountVerification` class as suggested in Problem 3, page 517, of the text book (see also section 8.8), and then write a variation as suggested in Problem 4.

Write a third charge account class that reads its command line arguments (that mysterious parameter to `main`!) so that the command

```
java ChargeVerification3 myAccountFile.txt 31245 32144 69877
```

produces something like

```
31245 is a valid account number.
32144 is not a valid account number.
69877 is a valid account number.
```

(depending on the contents of `myAccountFile.txt`).
