

Data Structures and Algorithm Analysis I

Professor: David Casperson, **Office:** Lib 444, **Phone:** 960-6672, **e-mail:** casper@unbc.ca

Prerequisites: CPSC 101 and CPSC 141, or permission of instructor.

Lecture times: MWF 10:30–11:20. **Room** 5-125. There are *no* assigned lab or tutorial times.

Text Book: *Data Structures and Algorithm Analysis (2nd edition)*, by Mark Allen Weiss. The second edition is vastly improved with respect to its use of C++.

Syllabus: Much of the material is from *Weiss*, in particular Chapters 2–4 and 7, with other material as time permits. I shall also cover material from Chapters 12, 13, 19, and 20 of *Deitel and Deitel*.

Topics include:

- 2 weeks • Templates, the Standard Template Library, containers, iterators, and generic programming in C++.
 - 2 weeks • Algorithm analysis and asymptotic complexity.
 - 2 weeks • Sorting algorithms.
 - 1 weeks • Error handling and exceptions.
 - 1 weeks • List classes.
 - 1 weeks • List based classes: stacks, queues, and deques.
 - 2 weeks • Tree classes.
- Times are approximate.

Grading Scheme:

Homework:	25%	
Midterm 1:	20%	Wed, Oct 11
Midterm 2:	20%	Mon, Nov 08
Final Exam:	35%	3h in 06–15 Dec

I reserve the right to change the weight of any portion of this marking scheme. If changes are made, your grade will be calculated using the original weighting and the new weighting, and you will be given the higher of the two.

References: *STL for C++ Programmers.*, by Leen Ammeraal. (Wiley, 1997)

C++ How to Program 2nd edition, by Deitel and Deitel.

The Art of Computer Programming by Donald E. Knuth. Difficult reading, but these three volumes contain a wealth of information on list data-structures, algorithmic analysis and sorting algorithms.

The C++ Programming Language 3rd edition, by Bjarne Stroustrup.
