

**TI'azt'en Nation
Community-Based Environmental Monitoring**

**-Science and Tradition-
Respect for our Elders
Respect for our People
Respect for our Land**

This DVD shares the knowledge and experiences of team members during the course of a research project titled, 'Evolving Co-Management Practice: Community-Based Environmental Monitoring with TI'azt'en Nation on the John Prince Research Forest,' which took place in Northern British Columbia, Canada.

Two teams of TI'azt'en Nation community members, a Forest Team and an Elders Team worked to shape and inform the development of the TI'azt'en Nation Community-Based Environmental Monitoring Method. This method was developed for five TI'azt'en Nation traditional use activities and their representative plant or animal species. These were: Fishing Salmon- Talo ha'hut'en; Hunting Moose- Huda ha'hut'en; Trapping Beaver- Tsa ha tsayih sula; Gathering Soapberries for Medicinal Use- Yoo ba ningwus hunuht'o; and, Picking Huckleberries- Duje hoonayin. This DVD shares our experiences, and the voices, knowledge, and wisdom of the team members.

This DVD was generously funded by:

- Social Sciences and Humanities Research Council of Canada through their Community-University Research Alliance (CURA) Program
 - Real Estate Foundation of BC
 - John Prince Research Forest
- and supported by the University of Northern British Columbia.
